

PAIR OF FOUR COLUMN LUCITE AND CHROME LAMPS

\$5,000 These striking lamps which feature four lucite columns resting on a chrome base are unique and reminiscent of the work of Karl Springer. The high quality of these lamps shines thru even when not illuminated! A unique feature is the addition of a switch just above the sockets. The fitting doubles as a switch and controls the brightness of the light by individually turning each socket on or off. The lamps feature hard sided orange satin shades and a decorative chrome tapered finial. There are three sockets on each lamp. These lamps both unique and stylish would make a great addition to any interior modern or more traditional.
