

A PETRIFIED WOOD ACCENT TABLE ON IRON AND COPPER BASE

\$3,000 This exceptional custom side table pairs the ancient beauty of a solid petrified wood slab with expertly repurposed ironwork salvaged from Ritts Co., creating a striking dialogue between natural history and industrial design heritage. The circular tabletop showcases the organic edge and richly variegated surface of petrified wood—formed over millions of years—revealing subtle mineral striations and fossilized textures unique to the material.

The base is constructed from original Ritts Co. iron elements, thoughtfully reimagined into a sculptural support structure. The ironwork features clean, architectural lines accented by hand-set copper rivets, lending warmth and refinement to the otherwise austere metal framework. The contrast between the primordial stone top and the refined industrial base gives the piece a distinctly modern yet timeless presence.

Both functional and sculptural, this one-of-a-kind petrified wood table works beautifully as a side table, occasional table, or accent piece in interiors ranging from modern and Brutalist to organic contemporary and collectible design settings. A true statement object, it reflects sustainable craftsmanship through the reuse of historic materials while celebrating the enduring allure of natural stone.
